## SOME GOOD ADVICE.

Ex-Gov. MacCorkle on Our Agricultural Conditions.

## RAILROADS AND FACTORIES.

Liberal Laws Invite Capital and

Capital is One of the South's

Greatest Needs at

this Time.

Hon. Wm. A. MacCorkle, ex-governor of West Virginia, who made a national reputation for the great work he did in the development of West Virginia while governor, contributes to the January number of the Southern Farm Magazine of Baltimore an unusually interesting and striking discussion of southern farm conditions, and how the agricultural interests of the south can alone be made prosperous.

Governor MacCorkle says: "The farmer is not in a good way in the south. The totals of his labor, taken as a whole, are enormous, but the farmer is not the gainer, and the south does not profit by her enormous yields as she should. She is another example of the proposition that a country cannot be rich and strong through agriculture alone. The loom, the reaper and the anvil must go together. Severed, they but furnish the raw material for other and more favorable communities. Transportation, the factory and the farm under wise and established laws can make the south an industrial empire and the southern farmer a mighty power in the world's affairs."

Discussing the situation, he says: "We cannot live under such conditions as have existed. The southern producer must change the mode of raising of the staples and seek other products for his farm. He cannot do this as things stand with him today, for with a long haul and no close home market, he cannot do otherwise than raise the staples of heavy farming. It needs no argument, but simply the re-expression of the statement that the glory of the southern farmer is to come through a change of methods looking to the diversification of his products. How will it be done? There is one way, and that is, enlarge our horizons, liberalize our laws, turn our faces to the east, welcome eastern and northern capital, establish by the side of the waterfront and in the midst of our cotton fields, on the one hand, and our iron mines and locate amidst our magnificent forests, the railroad and the factory."

Discussing the farm situation in New England and the lessons to be drawn from it by the southern farmer, MacCorkle says: "The farmer of New England this summer made a careful investigation of the situation. By reason of cheap western land, vast changes in the economies of transportation, and a tremendous farm depression, he was able to understand the east and west. They did not grasp the situation, and thought that they could not profitably use the land. The result is, in the last fifteen years, there has been a change in the value of the land. In 1880 the best product of Massachusetts was \$18,382,464; in 1885 it was \$17,932,464; in 1890 it was \$17,932,464; in 1895 it was \$17,932,464; in 1900 it was \$17,932,464; in 1905 it was \$17,932,464;
